The OB/GYN Group of Austin

The Austin Ob/Gyn group practice of Drs. Des Rosiers & Wernecke, Associates has changed its name to: The OB/GYN Group of Austin.

AUSTIN – October 2008 – Since 1965, the Austin women’s health practice known as Drs. Des Rosiers & Wernecke, Associates has served women with expert gynecological and obstetrical care. Now, the same group of renowned, board certified physicians and skilled staff will continue caring for patients under a new name—The OB/GYN Group of Austin. The new name reflects the group’s history of care, honoring the women for whom they have cared and the tens of thousands of infants they have delivered. The new name also reflects the practice’s forward-looking plans to continue serving more Austin women with the most advanced, state-of-the-art technology available in obstetrics and gynecology for years to come.

In addition to having a reputation throughout both patient and medical communities in Austin for providing the highest level of expert care, the practice also places a high regard on personal attention. Dr. Patrick D. Nunnally, serving as president of the group since 1995 after joining the group in 1981, states, “Maintaining strong, caring relationships with all our patients has always been a top priority for us. So while our name may change, patients should certainly still expect the same dignity, respect and friendship that have been our hallmark throughout our history.”

The OB/GYN Group of Austin will continue to operate from their offices in Central Austin at Medical Park Tower on West 38th Street.

About The Ob/Gyn Group of Austin

Established in 1965 by Dr. Joseph Des Rosiers, The OB/GYN Group of Austin has a staff of nine renowned, board certified OB/GYN physicians, a nurse midwife, nurse practitioner, and skilled business office. The group is committed to providing Austin women with premier expertise in obstetrics and gynecology, including pregnancy care and management, routine wellness exams. This long established group practice offers the most advanced, state-of-the-art technology, with many services available in-office, including lab work, bone density testing and digital mammography.
